

Data assurance and operational improvement

LucidLever Solutions LLC is a Virginia consulting company preparing to support federal prime contractors and commercial clients through scoped data quality assurance, reconciliation, reporting controls and operational excellence engagements.

CORE CAPABILITY AREAS

- Managed data quality assurance, validation rules and exception management
- Source-to-target and dataset reconciliation, migration validation
- Financial, procurement, operational and report quality control
- Audit issue analysis, evidence traceability and corrective action support
- Operational diagnostics, Lean Six Sigma and process redesign
- Quality metrics, dashboards and repeatable monitoring

SAMPLE SUBCONTRACT WORK PACKAGES

- Design and execute approved QC rulebooks on client datasets
- Reconcile inventory or financial source records to reporting outputs
- Validate complex reporting schedules with independent source evidence
- Track quality exceptions, remediation ownership and closure evidence
- Review operational handoffs and build an improvement action plan

HOW A FOCUSED ENGAGEMENT WORKS

Define success criteria, required sources, data access and acceptance rules. **Validate** records, reconcile findings and trace anomalies. **Improve** with an evidence register, root cause analysis, reporting and a prioritized corrective action plan. Potential deliverables include a requirements-to-test matrix, executed validation results, reconciliation evidence, defect and action registers, executive findings, and repeatable controls.

EXPERIENCE BEHIND THE APPROACH

Methods informed by individual professional experience in enterprise data operations and reliability, healthcare analytics QC, SQL and transformation validation, quality frameworks, exception operations, Lean Six Sigma and program delivery. This is professional experience, not company past performance.

DIFFERENTIATION

Operations-first scoping, robust test design, understandable exception evidence, team-friendly handoffs and control improvements built for long-term repeatability.
